

ABSTRACT OF THE DISCLOSURE

An image processing apparatus of the present invention is constituted by input means for inputting first image data and second image data, determining
5 means for determining a display position of the second image, and display control means for superimposing one of the first image and the second image on the other and displaying the first and second images on a monitor such that the second image
10 is positioned in the display position determined by the determining means, in which the determining means determines a display position of the second image such that the display position is changed within a range that is apart from the display position
15 determined last time by a predetermined number of pixels.
